## Application

**vinyPlus** **DRP 295** and **vinyPlus** **DRP 200** are made of high quality plastic material and are coated with a UV – resistant Renolit-Film. This is a guarantee for high durability, for resistance to rotting and to infestation by insects and it also saves the troublesome task of regular repainting.

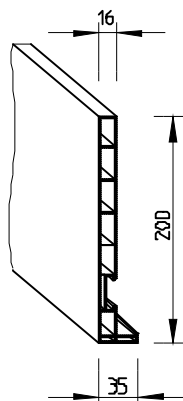

**vinyPlus** **DRP 295** and **vinyPlus** **DRP 200** can be used for window and door reveals, as a facing for uneven architraves, as well as being applicable in many other areas of the facade.

In combination with the **vinyPlus** Cladding Profiles (Shi lap and Round Profile) **vinyPlus** **DRP 295** and **vinyPlus** **DRP 200** are especially suitable when dealing with gables and roof edgings, when cladding eaves or when there is the need for a facing for the completion of a flat roof or for a soffit.
